

More VMware with Azure

As a VMware partner, accelerate your digital transformation with the partnership opportunity across clouds using Azure VMware Solution, a native VMware based environment on Azure.

Leverage Azure VMware Solution for a fast path to the cloud

- ▶ Seamlessly extend existing VMware workloads to Azure without the cost or effort of refactoring your customers applications. Protect existing VMware investments all while running and managing existing environments with the tools and processes that are already familiar to you and your customers.

Grow your existing infrastructure offering

Accelerate migration timelines for VMware customer base

Unlock new opportunities with customers who want to keep their VMware estate

Take advantage of Azure using existing VMware investments, skills, and tools

Modernize workloads with Azure VMware Solution by CloudSimple

Azure VMware Solution by CloudSimple allows you to seamlessly transition from your datacenter to Azure and run VMware workloads natively on Azure.

Microsoft provides and supports the management systems, networking services, operating platform, and backend infrastructure required to run VMware environments at scale in Azure.

Deploy VMware workloads on a dedicated, high-performance, single-tenant environment on Azure. This means you can provision, expand, and shrink your VMware infrastructure on demand—in minutes—while continuing to operate your VMware environment on Azure in the same way you would on-premise.

Leverage Azure economies of scale without the complexity of rearchitecting applications and modernize them at your own pace. The solution is supported, verified, and certified by VMware.
