

More Secure

Get more secure with hybrid security management and threat protection which has been unlocked by the scale and power of the public cloud.

Turn on Azure Security Center for the protection you need

- ▶ Infrastructure security is top of mind for organizations managing workloads on-premises, in the cloud, or in hybrid scenarios and traditional security is no longer adequate.

Quickly strengthen, monitor and improve your security posture and protect against threats

Address individual threats and benefit from easy onboarding of hybrid cloud workloads running in your own datacenter

Gain visibility into the compliance state of your Azure environment against common regulatory standards

Apply Security Policies to workloads running on-premises and in other clouds for simple, central management.

Azure Security Center operates in three main areas

- ▶ Cloud Security Posture Management
- ▶ Cloud Workload Protection (including threat detection and prevention for on-premise VMs)
- ▶ Data Security

Pricing starts around \$15 USD per month / per node.

Get Azure Sentinel to unlock more

Make your threat detection and response smarter and faster by building next-generation security operations with cloud and AI.

For a full standalone security information and event management (SIEM) solution, leverage Azure Sentinel, a single solution for alert detection, threat visibility, proactive hunting, and threat response.

Eliminate security infrastructure setup and maintenance, and elastically scale to meet your security needs, all while reducing IT costs.
